

There's a method to the success. Our partner management in detail.

1

Identification and categorisation

The identification of external staff for particular assignment profiles is based on a project completed together or a recommendation from our network. The technical emphasis is known with the result that a targeted search of our portfolio can be made in the first phase to find matches with the subject area.

2

Selection procedure

The technical and social skills of the applicant are determined in the second phase by means of a specific selection procedure.

3

Quality management

Quality management is a continuous process with all AlogO services. As part of our partner management, it serves to check the suitability of an external employee before they are admitted to the partner network.

4

Admission to the partner network

Employees are admitted to our partner network on the basis of a framework contract which defines the essential network standards.

5

Project deployment

As part of the process of selecting the right employee, their ability to fit into a team is also ensured besides their technical and social skills. Before being deployed on the project, the external employee is briefed on the client's environment and structure.

6

Continuous project controlling

Classical controlling processes closely coordinated with the client ensure that the defined objectives of the project are met.

7

Completion of project

After the project has been completed, a final report is produced which contains among other things the master data, a description, the parties involved and the results of the project. In the process, project leaders on the client's side as well as the external employee have the chance to assess the project.
